Sequence 4, Application US/08433037

Patent No. 5707028

GENERAL INFORMATION:
APPLICANT: Barr, Kathryn A.
APPLICANT: Brierley, Russell A.
APPLICANT: Brierley, Russell A.
APPLICANT: Trinil, Gregory P.
APPLICANT: Trinil, Gregory P.
APPLICANT: TSChopp, Justy F.
TITLE OF INVENTION: EXPRESSION OF HUMAN SERUM ALBUMIN IN TITLE OF INVENTION: PICHIA PASTORIS
NUMBER OF SEQUENCES: 19
CORRESPONDENCE ADDRESS:
ADDRESSEE: Scully, Scott, Murphy & Presser
STATE: New York
COUTTY: Garden City Plaza
CITY: Garden City
STATE: New York
COUTTY: U. S.A.
ZIP: 11530-0299

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              atase activity
Cycomment: Serum albumin, a predominant protein in the plasma of adults, is synthesized
lirubin, protoporphyrin, long-chain fatty acids, prostaglandins, steroid hormones
Cycomment: A large number of variants of human serum albumin have been described.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A;Map position: 4q11-4q13

A43256
mobilization protein mobA - Thiobacillus ferrooxidans plasmid pTF-FC2
C;Species: Thiobacillus ferrooxidans
C;Species: Thiobacillus ferrooxidans
C;Date: 10-Jun-1993 #sequence_revision 01-Dec-1995 #text_change 08-Oct-1999
C;Accession: A43256; S27622
R;Rohrer, U; Rawlings, D.E.
J; Bacteriol: 174, 6230-6237, 1992
A;Title: Sequence analysis and characterization of the mobilization region of a broad-hc
A;Reference number: A43256; MUD:93015664; PMID:1400173
A;Accession: A4326
A;Status: pre-liminary; not compared with conceptual translation
A;Molecule type: DNA
A;Residues: 1-409 <ROH>

8.0

```
The invention relates to human polymuclectides (AAI79941-AAI93841) and the encoded proteins (AAO00010-AAO13910) that exhibit activity elating to cytokine, cell proliferation or which may induce production of other cytokines in other cell populations. The polymeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, immunomodilatory activity and activity, tissue growth factor activity, immunomodilatory activity and activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Isolated nucleic acids and polypeptides, useful for preventing diagnosing and treating e.g. leukemia, inflammation and immune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; cytokine; cell proliferation; cell differentiation, gene the vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 20, SEQ ID NO 16528; 1399pp + Sequence Listing; English.
                                                                                                                                                                                                                                                                                                                       ALIGNMENTS

```
antiparkinsonian; and immunostimulant. The proteins and polynucleotides encoding them can be used in gene therapy, antisense therapy and vaccine production. The proteins and polynucleotides are useful for screening for agonists or antagonists of a protein and for the treatment and diagnosis of disorders associated with the activity of a protein e.g. inflammation, rheumatoid arthritis, septic shock, pancreaticis, cardiac dysfunction, neuropathology, cardiac anaphylaxis, viral, bacterial, HIV and fungal infections, autoimmunity, genetic diseases, haematopoietic disorders, anaemia, platelet disorders, thrombocytopaenia, wounds, burns, ulcers, osteoporosis, severe combined immunodeficiency, eczema, allergic rhinitis, asthma, diabetes, cancer, multiple sclerosis, depression, Alzheimer's disease, Parkinson's disease, neurodegenerative and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat., horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forms in cinterest. They can be used in diagnostics, formsics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; sheep; pig; cow; fruit fly; yeast; hamster; macaque; horse; tomato; monkey; dog; sea urchin; expressed sequence tag; BST; diagnostics; forensic test; gene mapping; genetic disorder; blodiversity; gene therapy; nutrition.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Isolated nucleic acids and polypeptides, useful for preventing diagnosing and treating e.g. leukemia, inflammation and immune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynpetides are useful in gene therapy, vaccines or peptide therapy. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, immunomodulatory activity and activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritts and inflammation. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human, cytokine, cell proliferation, cell differentiation, gene therapy, vaccine, peptide therapy, stem cell growth factor; haematopoiesis, tissue growth factor; immunomodulatory, cancer; leukaemia; nervous system disorders; arthritis; inflammation.

The method relates to a method of recombinantly producing human serum albumin (HSA) in yeast by altering the coding sequence of HSA to comprise a yeast codon bias. The complete HSA gene (AAA10091) was generated as three synthetic fragments (AAA10092-A10094) joined by recombinant DNA technology. Each HSA fragment was synthesised from overlapping oligonucleotide fragments that were extended. This sequence represents the sequence of the HSA fragment HSA-II encoded by the human gene with a yeast codon bias. The invention also covers a recombinant expression the process for producing human serum albumin in the yeast host cell,
                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

Human serum albumin fragment - where C-terminal of human serum albumin is lacking and which can be combined with various drugs.

89JP-00344701.

29-DEC-1989;

WPI; 1991-300976/41 (TOFU ) TONEN CORP.

Claim 1; Page 1; 23pp; Japanese.

This sequence corresponds to amino acids 1 to 303 of mature human serum albumin. The fragment lacking the C-terminal sequence can form part of a fusion protein, for example with drugs. (This sequence is taken from the full-length HSA sequence in EP-330451). See also AAR14179

Sequence 303 AA;

```
The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the present of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberran expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used as nutritional supplements. They may be used to increase stem cell proliferation; to regulate haematopoissis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or atimulation; as anti-inflammatory agents; and in treatment of leukaemias. AMU29310-AMU33304 represent the amino acid sequences of novel human expression and the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ô

This sequence corresponds to amino acids 123 to 585 of mature human serum albumin. The fragment lacking the N-terminal sequence can form part of a fusion protein, for example with drugs. (This sequence is taken from the full-length HSA sequence in EP-330451). See also AAR14178
                                                                                                                                                                                                                                                           Human serum albumin fragment - where C-terminal of human serum albumin is lacking and which can be combined with various drugs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New heterologous fusion proteins with granulocyte-colony stimulating factor activity, useful for increasing neutrophil levels and treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Heterologous fusion protein related protein sequence SEQ ID NO:25

The present invention describes a heterologous fusion protein (I)

Comprising a hyperglycosylated granulocyte-colony stimulating factor (G-
CSF) analogue fused to a polypeptide having human albumin, human albumin

analogues, or fragments of human albumin, or the Fc portion of an immunoglobulin, or

fragments of the Fc portion of an immunoglobulin. Also described: (I) a

heterologous fusion protein, which is the product of the expression in a

controlled an exogenous DNA sequence encoding (I); (2) an isolated

host cell of an exogenous DNA sequence encoding (I); (2) an isolated

comprising 1044 base pairs (see ADD32010), fused to the DNA

comprising 1044 base pairs (see ADD32010), fused to the DNA

comprising the administration of (I); (4) pharmaceutical formulations

comprising the administration of (I); (4) pharmaceutical formulations

adapted for the breatment of patients with insufficient neutrophil levels

comprising namy of (I); (5) a vector comprising the polynucleotide of (2);

(6) host cells comprising the vector of (5), or expressing at least one

heterologous protein; and (7) producing (I) are particularly useful in

activity, and can be used in protein therapy. (I) can be used for

medicaments for the treatment of patients with insufficient circulating

controlly levels or for the manufacture of a medicament for the

cutrophil levels or for the manufacture of a medicament for the

cutratable by stimulation of circulating neutrophils such as after

chemotherapy regimens or in chronic congenital neutrophila. The present

chemotherapy regimens or in chronic congenital neutrophila.

chemotherapy regimens or in chronic congenital neutrophila.
      ö
patients with low circulating neutrophils, such as after chemotherapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human, vaccination, gene therapy, nutritional supplement, stem cell proliferation, haematopoiesis, nerve tissue regeneration, immune stimulation, anti-inflammatory, leukaemia.

The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predsposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the conclination are also useful for producing the proteins are also useful for producing the proteins. The proteins of as nutritional supplements. They may be used to increase stem cell proliferation; to regulate haematopoissis, and in bone, cartilage, tendon and conclination; as anti-inflammatory agents; and in treatment of leukaemias. Conclination; as anti-inflammatory agents; and in treatment of leukaemias. Alugabilo-Abula3304 represent the amino acid sequences of novel human concerned.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                       Nucleic acids encoding a range of human polypeptides, useful in genetic vaccination, testing and therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ó

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence Sequence S

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

(HYSE-) HYSEQ INC.

Isolated nucleic acids and polypeptides, useful for preventing diagnosing and treating e.g. leukemia, inflammation and immune disorders.

The invention relates to human polymucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopolesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and

```
Isolated nucleic acids and polypeptides, useful for preventing diagnosing and treating e.g. leukemia, inflammation and immune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides are various cytokine-like activities, e.g. atem cell growth factor activity, haematopoiesis regulating activity, insue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and filfammation. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                           Human, cytokine, cell proliferation, cell differentiation, gene therapy, vaccine, peptide cherapy, stem cell growth factor; haematopoiesis, tiseue growth factor; immunomodulatory, cancer, leukaemia, nervous system disorders; arthritis; inflammation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used as nutritional supplements. They may be used to increase stem cell proliferation, to regulate haematopoiesis, and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or etimulation; as anti-inflammatory agents; and in treatment of leukaemias. AUC29510-AAU33304 represent the amino acid sequences of novel human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Mammal; human; rhesus monkey; baker's yeast; fission yeast; Norway rat; mouse; Chinese hamster; African clawed frog; fruit fly; dog; leukaemia; cancer; lymphoma; neuroblastoma; autoimmune disorder; cell proliferation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nucleic acids encoding a range of human polypeptides, useful in genetic vaccination, testing and therapy.

Sequences AAU27676-AAU28019 represent full-length polypeptides and contignolypeptides of the invention. The proteins and their associated DNA control of the invention. The proteins and their associated DNA control of the invention. The protein as an analysis of disorder in a mammalian subject such as a human, dog, warious types of disorder in a mammalian subject such as a human, dog, control of the search and neuroblastoma, autoimmune disorders such as multiple sclerosis, connective tissue disease, rheumatoid arthritis, disorders such as Parkinson's disorders such as Parkinson's disease, Huntington's chorea, amyotrophic lateral sclerosis, spinal muscular atrophy and disorder, amyotrophic lateral sclerosis, spinal muscular atrophy and wernicke disease, inflammatory disorders such as nephritis, Crohn's disease, ischaemia-reperfusion injury, shock, sepsis and inflammatory bowel disease. The sequences exhibit activity relating to anglogenesis, cell proliferation, cell differentiation, stem cell growth factor. Control of over itself the tone control of one control of caugment or replace cells damaged by illness, accidental damage of enetic cartilage, tendons and ligaments and in tissue repair and burn healing. Control of the printed specification, but were obtained in electronic format directly from WIPO control of the printed printe
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
Novel polypeptides and nucleic acids obtained from cDNA libraries prepared from various human tissues, for diagnosis, treatment of cancer, neurological, inflammatory disorders and for use in arrays for detection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    100.0%; Score 51; DB 4; Length 187; 100.0%; Pred. the full feature of or predisposition to a disease associated determining the presence of or predisposition to a disease associated determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the mucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used to express them are also useful for producing the proteins are useful in genetic vaccination, testing and therapy, and can be used to surfacesse stem cell or proliferation, to regulate haematopolesis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or attiluation; as anti-inflammatory agents; and in treatment of leukaemias. AM109510-AM033304 represent the amino acid sequences of novel human secreted proteins of the invention
                                                                                                                                                                                                                                                                           Nucleic acids encoding a range of human polypeptides, useful in genetic vaccination, testing and therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    stem cell proliferation; haematopoiesis; nerve tissue regeneration;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            °,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The method relates to a method of recombinantly producing human serum albumin (HSA) in yeast by altering the coding sequence of HSA to comprise a yeast codon bias. The complete HSA gene (AAA10091) was generated as three synthetic fragments (AAA10092-A10094) joined by recombinant DNA technology. Each HSA fragment was synthesised from overlapping oligonuclectide fragments that were extended. This sequence represents the sequence of the HSA fragment HSA-III encoded by the human gene with a yeast codon bias. The invention also covers a recombinant expression vector, yeast host cells carrying the recombinant expression vector and the process for producing human serum albumin in the yeast host cell,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Process for preparing recombined human serum albumin comprising yeast biased sex codons - uses a recombinant DNA technique.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human, vaccination, gene therapy, nutritional supplement,

The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for useful an pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used as nutritional supplements. They may be used to increase stem cell proliferation; to requirate hemantopolessis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or stimulation, as anti-inflammatory agents; and in treatment of leukaemias.

AAUZ9510 AAU3101 for the mine acid sequences of novel human
                                                                                                                                    Nucleic acids encoding a range of human polypeptides, useful in genetic vaccination, testing and therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; vaccination; gene therapy; nutritional supplement;

The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to abstrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acide encoding the polypeptides and cells genetically engineers nucleic acide encoding the polypeptides and cells genetically engineers to express them are also useful for producing the proteins. The proteins of a unitational supplements. They may be used to increase stem cell proliferation, to regulate haematopoiesis, and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemias. AMI29510-AAU33304 represent the amino acid sequences of novel human construction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Nucleic acids encoding a range of human polypeptides, useful in genetic vaccination, testing and therapy.

with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide wectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used as nutritional supplements. They may be used to increase stem cell proliferation; to regulate haematopoissis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemias. AAU25510-AAU33304 represent the amino acid sequences of novel human secreted proteins of the invention

Nucleic acids encoding a range of human polypeptides, useful in genetic vaccination, testing and therapy.

Claim 20; Page 696; 765pp; English

The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the motelic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used

```
as nutritional supplements. They may be used to increase stem cell proliferation, to regulate haematopoiesis; and in bone, cartilage, tendon stand/or nerve tissue growth or regeneration; immune suppression and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemias. Nucleic acids encoding a range of human polypeptides, useful in genetic vaccination, testing and therapy.

Claim 20; Page 206; 765pp; English.

The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying at therapeutic agent for use in treatment of a pathology related to abstrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used a nutritional supplements. They may be used to increase stem cell proliferation, to regulate haematopodesis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or etimate and relations as anti-inflammatory agents; and in treatment of leukaemias.

Secreted proteins of the invention 

```
The synthetic gene was constructed by designing a nucleotide sequence in which the codons which are most frequently used by the chosen non-human host were selected. In this case, it is yeast cells (LL20; Leu2-3; 112, His 3-11, 15). The synthetic HSA gene was assembled from 24 coligonucleotide blocks. HSA is used in therapy for the treatment of hypovolaemia, shock and hypoalbuminaemia. It is also used as an additive in perfusion liq. for extracorporeal circulation and as an experimental antigen. (Updated on 25-MAR-2003 to correct PA field.) (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Artificial gene coding for authentic human serum albumin - constructed on
the basis of codons most frequently used by chosen non-human host.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human serum albumin; mature protein; new polypeptides; plasma expanders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to testing human cancer cells, comprising obtaining cancer cells from the patient and contacting the cell ex vivo with an antibody to the receptor for human albumin. The method is useful for testing human cancer cells in particular breast and prostate cancer cells. The present sequence is mature human serum albumin, HSA. The antipoliferative effect of HSA was assayed in an experiment included in the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Testing human cancer cells, especially breast and prostate cancer cells, by contacting cancer cells obtained from biopsy of a patient ex vivo with antibody specific to human albumin receptor.

Ballance DJ, Hinchliffe E, Geisow MJ, Senior PJ; (DELZ ) DELTA BIOTECHNOLOGY LTD. 87GB-00025529. WPI; 1989-186464/26. N-PSDB; AAN90128. 30-OCT-1987; 

New N-terminal fragments of human serum albumin - esp. useful as blood plasma expanders.

Disclosure, Fig 2; 20pp; English.

Mature protein of human serum albumin (see corresp. AAN90128). Used to make new N-terminal fragments which are used as plasma expanders, or as substitutes for HSA or BSA, in tissue culture media. (Updated on 25-MAR-2003 to correct PA field.) (Updated on 24-OCT-2003 to standardise OS field)

Sequence 3, Application US/08222619
Patent No. 5662352
GENERAL INFORMATION:
APPLICANT: Lichenstein, Henri
APPLICANT: Wurfel, Mark
APPLICANT: Wright, Samuel
TITLE OF INVENTION: Afamin: A Human Serum Albumin-Like
TITLE OF INVENTION: Afamin: A Human Serum Albumin-Like
TITLE OF INVENTION: Protein
NUMBER OF SEQUENCES: 33
CORRESPONDENCE ADDRESS:
ADDRESSEE: Amgen Center, Patent Operations/RRC
STREET: 1840 DeHavilland Drive
CITY: Thousand Oaks
STREET: 1840 DeHavilland Drive
COUNTRY: U.S.
ZIP: 91320-1789
COMPUTER READABLE FORM:
MEDTUM TYPE: Floppy disk
COMPUTER: IBM PC Compatible
OMPUTER: Patentin Release #1.0, Version #1.25

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-! -CORACTOR: FAD; probably binds one or two 4Fe-4S clusters.
-! SIMILARITY: In the N-terminal, belongs to the bacterial-type ferredoxin family.
-! SIMILARITY: IN THE C-TERMINAL, TO OTHER FERREDOXIN NADP
                                                                                                                                                                                                    Bacteria; Actinobacteria; Actinobacteridae; Actinomycetales; Corymebacterineae; Mycobacteriaes; Mycobacterium.

Evidence for the repetitive domain structure of pig calpastatin as demonstrated by cloning of complementary DNA.";

TENDIATION: Specific inhibition of calpain (calcium-dependent cysteine protease). Plays a key role in postmortem tenderization of meat and have been proposed to be involved in muscle protein degradation in living tissue.

C -- DOMAIN: Has four inhibitory domains.

C -- SIMILARITY: Belongs to the calpastatin family.

"A deduced Thermononospora curvata protein containing

"A deduced Thermonone protein kinase and WD-repeat domains.";

"Bacteriol. 178:1489-1489(1996).

-: FUNCTION: MAY PLAY A REGULATORY ROLE DURING THE COMPLEX GROWTH
OYCLE AND IN SECONDARY METABOLITE PRODUCTION.

-: CATALYTIC ACTIVITY: ATP 4 a protein = ADP + a phosphoprotein.

-: SIMILARITY: Belongs to the Ser/Thr family of protein kinases.

-: SIMILARITY: Contains 7 WD repeats.

"The complete genome sequence of Mycobacterium bovis.";
Proc. Natl. Acad. Sci. U.S.A. 100:7877-7882(2003).
-:- FUNCTION: DNA-dependent RNA polymerase catalyzes the transcription of DNA into RNA using the four ribonucleoside triphosphates as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                      {RNA}(N).
-!- SUBUNIT: The enzyme consists of the sigma chain and the core enzyme which is composed of 2 alpha chains, 1 beta chain, and 1 beta' chain.
-!- SIMILARITY: Belongs to the RNA polymerase beta' chain family.
                                                                                                                                                                                                                                                                       substrates.
CATALYTIC ACTIVITY: N nucleoside triphosphate = N diphosphate +
